

## Handball Court

Aggo only allows two people to play handball at a time. Most handball courts have areas for four players in a square divided into four smaller squares. Design your own handball court that meets the following criteria -

- Four people can play at once.
- Each player's area is equal.
- Each square touches the three others at one or more points.

Be creative. You can use different shapes such as triangles, diamonds, pentagons... anything!

Design a handball court that caters for more than four players. Once again, be creative. You may like to research shapes that tessellate to help with your design.

Draw your court outside using a ruler and chalk. Have a game of handball and test out your design.
